Official Case Brief & Problem Statement

UTSC 2026 Edition

Build with AI

Powered by Google

The Adaptive Brain (EdTech)

The Context

Exam season is a universal point of high stress for university students across all institutions. However, the "standard" way of studying is built for a very specific type of learner: reading textbooks, reviewing hundreds of pages of notes, and relying on memorization.

Students whose first language is not English, or who have neurodivergent profiles (such as ADHD, autism, or dyslexia), often require additional time to process academic materials due to increased cognitive load and differences in language and information processing. These challenges can lead to slower reading, repeated reprocessing of information, and heightened academic stress, which may contribute to disengagement and burnout.

The Problem Statement

- **How can we build an AI-driven tool that helps students prepare for exams by adapting any academic content into a format that matches their unique learning style?**

You need to design a tool that doesn't rely on a specific university's system. Instead, it should be a "Study Companion" that can take any user-provided input (text, audio, or images) and transform it into a personalized learning experience.

Your solution should be flexible enough to help any student, such as:

- **The Multi-Modal Learner:** A student who needs to "hear" their written notes to truly understand them while commuting.
- **The "Focus-Seeking" Student:** A student with ADHD who needs long chapters broken down into 5-minute interactive challenges or "gamified" milestones.
- **The Global Scholar:** An international student who needs a tool to explain high-level academic concepts using simpler vocabulary without losing the technical accuracy required for an exam.

Submission Details

Deadline: March 25th, 2026 | 12:00 PM EST
Portal: [Submit via Google Form](#) (or via link in our bio @gdgutsc)

What to Include:

- **GitHub Repository:** Your commits need to be after the start of Case Comp.
- **The Pitch:** A video demo or presentation (maximum 4 minutes).

Winners will be announced during **the Build With AI Closing Ceremony on March 28, 2026.**
